

Five Axis Laser Capabilities

Tools Inc. offers Five Axis Laser cutting on three Prima 2200 watt Rapido CNC machines. A major advantage of this technology is the ability to continuously cut three dimensional shapes perpendicular to the surface of the material. The Five Axis Laser will cut in multiple planes in the same setup.

Applications:

- Tough trimming operations
- Quantity will not justify capital expense of hard tooling
- Prototype parts
- Engineering changes
- Research and development

From our experience with Five Axis Lasers, we know we are saving our customers money and time with equal or better quality results.
